Employment

- From 2020 **Assistant Professor of Finance**, Babson College
- 2013 – 2019 **Assistant Professor of Finance**, W.P. Carey School of Business, Arizona State University
Honors Faculty; Barrett the Honors College (2015–19)

Other past positions

- 2010 **Price Theory Scholar**, Becker Center on Chicago Price Theory, University of Chicago
- 2008 – 2009 **Economics and International Trade Team Member**, Obama-Biden Presidential Transition Team
- 2006 **Consultant**, Bain & Company (Tokyo)
- 2005 – 2006 **Senior Associate Consultant**, Bain & Company (New York and Tokyo)
- 2004 – 2005 **Special Assistant**, Office of Strategic Initiatives, New York City Department of Education
- 2002 – 2004 **Associate Consultant**, Bain & Company (New York)

Education

- 2013 **Ph.D.**, *Economics*, Stanford University
Dissertation committee: Nicholas Bloom (chair), Ran Abramitzky, Caroline Hoxby
- 2002 **A.B. magna cum laude**, *Applied Mathematics with citation in Japanese Language*, Harvard University

Research

Refereed publications

Financial inclusion, human capital, and wealth accumulation: Evidence from the Freedman's Savings Bank,

The Review of Financial Studies, 33 (11), 5333–5377, November 2020 (with Constantine Yannelis)
Best Paper, 2019 University of Oregon Summer Finance Conference

This paper studies how access to financial services among a previously unbanked group affects human capital, labor market, and wealth outcomes. We use novel data from the Freedman's Savings Bank—created following the American Civil War to serve free Blacks—employing an instrumental variables strategy exploiting the staggered rollout of bank branches. Families with accounts are more likely to have children in school, be literate, work, and have higher occupational income, business ownership and real estate wealth. Placebo effects are not present using planned but unbuilt branches, or for Whites, suggesting significant positive effects of financial inclusion.

Independent executive directors: How distraction affects their advisory and monitoring roles,

Journal of Corporate Finance, 56, 199–223, June 2019 (with Hong Zhao)

Active corporate executives are a popular source of independent directors. Although their knowledge, expertise, and network can bring value to firms on whose boards they sit, independent executive directors may be more likely to be distracted than other directors due to their outside executive roles. Using newly constructed data linking independent directors to their employers, we identify periods when employers' poor performance may distract them from board service. We find that firms with distracted independent executive directors have lower performance and value, higher CEO compensation, reduced CEO turnover–performance sensitivity, lower earnings quality, and lower M&A performance. These adverse effects are mainly driven by distracted directors who sit on relevant committees, and are stronger for small boards.

The “visible hand”: Race and online market outcomes,

The Economic Journal, 123 (572), F469–F492, November 2013 (with Jennifer L. Doleac)

We examine the effect of race on market outcomes by selling iPods through local online classified advertisements throughout the United States. Each advertisement features a photograph including a dark- or light-skinned hand, or one with a wrist tattoo. Black sellers receive fewer and lower offers than white sellers, and the correspondence with black sellers indicates lower levels of trust. Black sellers' outcomes are particularly poor in thin markets (suggesting that discrimination may not “survive” competition among buyers) and those with the most racial isolation and property crime (consistent with channels through which statistical discrimination might operate).

Working papers

Angels, entrepreneurship, and employment dynamics: Evidence from investor accreditation rules, Revision requested, *The Journal of Financial Economics* (with Laura Lindsey)

This paper examines the effects of a shock to angel finance on entrepreneurial activity and employment. Using U.S. Census data, we estimate the state-level fraction of households that lost accreditation status from Dodd–Frank's elimination of housing wealth in determining accreditation. A larger reduction in the pool of potential investors reduces firm entry and employment at small entrants, particularly in areas with alternate sources of financing. Employment increases at small and young incumbents, and relative wages for the startup sector decline, especially for high-skilled workers and industries. These results suggest that angels are an important source of entrepreneurial finance to high-quality, competitive firms.

The gendered impacts of perceived skin tone: Evidence from African American siblings in 1870–1940 (with Ran Abramitzky, Jacob Conway, and Roy Mill)

We study differences in economic outcomes by perceived skin tone among African Americans using full-count U.S. decennial census data from the late-19th and early-20th centuries. Comparing children coded as “Black” or “Mulatto” by census enumerators and linking these children across population censuses, we first document large gaps in educational attainment and income among African Americans with darker and lighter perceived skin tones. To disentangle the drivers of these gaps, we identify all 36,329 families in which enumerators assigned same-gender siblings different Black/Mulatto classifications. Relative to sisters coded as Mulatto, sisters coded as Black had lower educational attainment, were less likely to marry, and had lower-earning, less-educated husbands. These patterns are consistent with more severe contemporaneous discrimination against African American women with darker perceived skin tones. In contrast, we find similar educational attainment, marital outcomes, and incomes among differently-classified brothers. Men perceived as African Americans of any skin tone faced similar contemporaneous discrimination, consistent with the “one-drop” racial classification rule that grouped together individuals with any known Black ancestry. Lower incomes for African American men perceived as having darker skin tone in the general population were driven by differences in opportunities and resources that varied across families, likely reflecting the impacts of historical or family-level discrimination.

Racial discrimination in asset prices: Evidence from horse betting (with Spencer Barnes)

In the presence of behavioral biases, prices can diverge from fundamentals, and the effects of racial/ethnic bias are evident in many financial and non-financial markets. We investigate the determinants and consequences of discrimination in parimutuel horse betting, characterized by significant limits to arbitrage, short termination windows, posted payouts, extensive public information about fundamentals, and an absence of systematic risk. We consider return differences across horses whose trainers have racially/ethnically distinctive surnames, which bettors may see as a proxy for horse quality (accurately or inaccurately) or a source of non-pecuniary returns (due to animus). Horses with non-white-named trainers earn higher realized returns. These differences exist despite the fact that they are disproportionately likely to train longshots, who receive lower returns under the well-known “favorite–longshot” bias. Risk-adjusting to control for these effects, we find evidence for racial/ethnic return differences, especially among long shots, among horses with poor prior performance, in low-stakes races with “fast” conditions, and in the U.S. South. These results are consistent with the effects of discrimination being strongest among the least informed bettors and those most subject to other behavioral biases.

Economic uncertainty and earnings management (with Charles C.Y. Wang)

In the presence of managerial short-termism and asymmetric information about skill and effort provision, firms may opportunistically shift earnings from uncertain to more certain times. We document empirically that when financial markets are less certain about a firm's future value, the firm reports more negative discretionary accruals. Stock-price responses to earnings surprises are moderated when firm-level uncertainty is high, consistent with performance being attributed more to luck rather than skill and effort, which can create incentives to shift earnings toward lower-uncertainty periods. We document that the resulting opportunistic earnings management is concentrated in CEOs, firms, and periods where such incentives are likely to be strongest: (1) where CEO wealth is sensitive to change in the share price, (2) where announced earnings are particularly likely to be an important source of information about managerial ability and effort, and (3) before implementation of Sarbanes-Oxley made opportunistic earnings management more challenging. Our evidence highlights a novel channel through which uncertainty affects managerial decision making in the presence of agency conflicts.

Tax-timing options and the demand for idiosyncratic volatility (with Oliver Boguth)

Investors have a choice over when to incur taxes on individual investments, and typically benefit from delaying the realization of capital gains while harvesting losses. This option implies that the effective tax rate on capital losses exceeds the one on capital gains, resulting in a convex after-tax payoff. Convexity creates a demand for idiosyncratic volatility (IVOL) within a well-diversified portfolio, and can therefore explain the puzzling negative relation between IVOL and expected stock returns. A simple model with tax-timing options predicts that the demand for idiosyncratic volatility increases with the tax rate, the nominal interest rate, and unrealized capital gains, and we show that all three measures predict the IVOL premium in the time-series. In the cross-section, we show that the magnitude of the IVOL premium increases with investors' average tax exposure.

The effect of uncertainty on investment, hiring, and R&D: Causal evidence from equity options (with Elizabeth C. Stone)

There is wide debate over the impact of uncertainty on firm behavior, due to the difficulty both of measuring uncertainty and of identifying causality. This paper takes three steps that attempt to address these challenges. First, we develop an instrumental variables strategy that exploits firms' differential exposure to energy and currency prices and volatility. For example, airlines are negatively affected by high oil prices while oil refiners benefit from them, but both are sensitive to oil price volatility; retailers, in comparison, are not particularly sensitive to either the level or volatility of oil prices. Second, we use the expected volatility of stock prices as implied by equity options to obtain forward-looking measures of uncertainty over firms' business conditions. Finally, we examine how uncertainty affects a range of outcomes: capital investment, hiring, research and development, and advertising. We find that uncertainty depresses capital investment, hiring, and advertising, but encourages R&D spending. This perhaps-surprising result for R&D is consistent with a theoretical literature emphasizing that long investment lags create valuable real put options which offset the effects of call options lost when projects are started. Aggregating across our panel of Compustat firms, we find that rising uncertainty accounts for roughly a third of the fall in capital investment and hiring that occurred in 2008–10.

Fellowships and prizes

- 2022 **Deans' Award for Excellence in Graduate Teaching**, Babson College
Annual award to one faculty member for "excellence and innovative practices in teaching"
- 2022 **Thomas Kennedy Award for Teaching Excellence**, Babson College
"Faculty of the Year" awarded annually by graduating class to one faculty member "who personifies teaching excellence at the graduate level and whose personal standards of quality and caring extend beyond the classroom"
- 2021 – 2023 **Teaching Innovation Fund Award**, Center for Engaged Learning and Teaching, Babson College
Award supporting "The Freedman's Savings Bank: The (Broken) Promise of America's First Black Bank"
- 2019 **Huizingh Outstanding Undergraduate Teacher Award**, W.P. Carey School of Business, ASU
Annual award to two instructors "dedicated to inspiring students through excellence in teaching and mentoring"
- 2019 **Dean's Excellence in Research Summer Grant**, W.P. Carey School of Business, ASU (declined)
- 2016 2018 **Huizingh Outstanding Undergraduate Teacher Award Finalist**, W.P. Carey School of Business, ASU
- 2011 – 2012 **Walter J. Gores Faculty Achievement Award for Excellence in Teaching**, Stanford University
Stanford's "highest award for excellence in teaching," awarded annually to one graduate student university-wide
- 2011 – 2012 **Shultz Graduate Fellowship in Economic Policy**, Stanford Institute for Economic Policy Research
- 2010 – 2011 **Gerald J. Lieberman Fellowship**, Stanford University
- 2009 – 2010 **George Shultz Dissertation Support Fellowship**, Stanford Institute for Economic Policy Research
- 2009 **Economics Department Outstanding Teaching Assistant Award**, Stanford University
- 2007 – 2008 **Forman Family Fellowship in Economics**, Stanford University
Highest overall score on graduate qualifying examinations
- 2000 **Tazuko Ajiro Monane Prize**, Harvard University
- 2000 **Harvard-Rotary International Fellowship**, Okayama-Minami (Japan) Rotary Club
- 1998 **USA Mathematical Olympiad Honorable Mention**

Teaching experience

- 2021 – 2024 **Financial Data Analysis and Practice**, M.S. in Finance (Babson Finance 6200)
2020 – 2023 **Introduction to Financial Management**, Miami “Blended” M.B.A. (Babson Finance 7200)
2021 – 2022 **Finance for Entrepreneurs**, M.S. in Entrepreneurial Leadership (Babson Finance 6110)
2020 – 2021 **Finance**, M.B.A. (Babson Finance 7800)
2019 **Identification Strategies in Corporate Finance**, Ph.D. (ASU Finance 791; with Mark Seasholes)
2014 – 2019 **Managerial Finance**, Undergraduate (ASU Finance 302)
2010 – 2011 **OHS Microeconomics**, High School (Stanford EPGY OHS Econ. 20)
2009 **Intermediate Microeconomics**, Undergraduate (Stanford Econ. 50)
2007 – 2008 **Microeconomic Theory for Non-Economics Ph.D. Students**, Ph.D. (Stanford Econ. 202N)

Teaching Assistant

- 2013 **Introduction to Financial Economics**, Undergraduate (Stanford Econ. 140)
2012 **Managerial Economics**, M.B.A. (Stanford GSB Management Econ. 200)
2012 **Economics for Sloan Fellows**, M.S. (Stanford GSB Management Econ. 209)
2011 **Emergency Medical Technician Training**, Undergraduate (Stanford Med. School Surgery 111/211A)
2009 **First-Year Macroeconomics**, Ph.D. (Stanford Econ. 210)

Case Development
